Everyday decisions for staff and contractors

Approved work and access

Use approved devices, accounts and business services.

Access only the resources your role authorises.

Request new access through your manager and resource owner.

Information handling

Keep project files in approved storage.

Check recipients and link permissions before sharing.

Keep passwords, recovery codes and incident evidence private.

Devices and workspaces

Lock your screen whenever you leave the device.

Secure paper records and collect printing promptly.

Report missing equipment through the incident route.

Network and software use

Use the approved network and remote access method.

Ask IT before installing software or connecting unknown media.

Do not bypass access restrictions or disable security controls.

Scenario: an urgent file request

A message asks you to upload project files to a new website.

The sender says the normal approval can wait.

What would you check before sharing anything?

Reporting a suspected incident

Contact the nominated IT Administrator through a known route.

Record what happened, when, and which device or account is involved.

Preserve evidence and follow the responder's instructions.

Access request procedure

1. Tell your manager which resource and task need access.
2. The resource owner approves the level and expiry.
3. IT records the change. Check access with your own account.

Daily sign-in and account recovery

1. Use your assigned account on an approved device.
2. Approve MFA only for a sign-in you started.
3. Stop repeated failed attempts and contact IT for recovery.

File sharing procedure

1. Confirm the information owner and intended recipient.
2. Use approved storage with the minimum sharing rights.
3. Check the link, send it securely and remove expired access.

Email and suspicious message procedure

1. Check the sender and verify unusual requests independently.
2. Leave unexpected links and attachments unopened.
3. Report the message through the known incident route.

Software and removable media procedure

1. Request software or USB use with a clear business reason.
2. Wait for IT approval and the required security checks.
3. Use the approved installation or transfer method.

Remote work and network access

1. Use the remote access service that IT has approved.
2. Protect the device and keep work on approved services.
3. Report connection failures through IT before changing settings.

Visitor and contractor access

1. The sponsor confirms the visitor and access requirements.
2. Use the designated guest network and approved accounts.
3. End temporary access and return equipment when work finishes.

Printing and end-of-shift procedure

1. Collect printouts promptly and secure sensitive papers.
2. Save work in approved storage and sign out of shared devices.
3. Lock or secure equipment and use approved confidential disposal.

Lost device and accidental disclosure

1. Report the loss or disclosure as soon as you notice it.
2. Provide the device or file details and last known time.
3. Follow IT instructions for access restriction and recovery.

Incident reporting and follow-up

1. Contact the primary responder through a known route.
2. Record symptoms, time and affected device or account.
3. Use the backup route if no responder acknowledges the report.

Exception and access-change process

1. Explain the business need and duration to your manager.
2. The owner and IT assess and record the proposed exception.
3. Use only the approved scope and confirm removal at expiry.

Practice scenarios

A contractor asks for your login to download a project drawing.

You sent a restricted file to the wrong external recipient.

An unfamiliar USB drive appears beside a shared workstation.

Completion and acknowledgement

Demonstrate screen locking and explain an access request.

Explain safe file sharing and practise an incident report.

Record attendance, module version and topics needing review.
