

Password and access quiz

Six questions with clickable answer feedback

Record one point for each correct first answer.

[Start quiz](#)

1 of 6 What does authorisation control?

A The actions your identity may perform

B Whether your password matches

C Whether your device has Internet access

Correct answer

Authorisation controls permitted resources and actions. Authentication checks identity.

Add one point if this was your first answer.

2 of 6 A colleague asks for your password

A Share it and change it tomorrow

B Ask the owner to approve their own access

C Send it through a private chat

Correct answer

Use the colleague's own identity and an approved access request. Password sharing removes accountability.

Add one point if this was your first answer.

3 of 6 An MFA prompt arrives unexpectedly

A Approve it to stop the prompts

B Tell a colleague to approve it

C Decline it and report through the known route

Correct answer

An unexpected prompt may indicate account misuse. Decline it and contact the approved responder.

Add one point if this was your first answer.

4 of 6 You need a password for a new account

A Reuse a strong password from another account

B Use a unique long password in the approved manager

C Use the project name and current year

Correct answer

A unique long password limits reuse risk. The proposed PrimeCore baseline is at least 15 characters where supported.

Add one point if this was your first answer.

5 of 6 A user changes to a different role

A Keep all old permissions in case they are useful

B Add the new rights and skip review

C Approve new rights and remove obsolete access

Correct answer

A role change requires a review of both old and new rights. Record approval and test effective access.

Add one point if this was your first answer.

6 of 6 Your login keeps failing

A Keep guessing until a password works

B Stop and contact IT through the known recovery route

C Borrow a colleague's administrator account

Correct answer

IT verifies your identity and the failure source before restoring access. Repeated guessing can trigger a lockout.

Add one point if this was your first answer.
