

Security Incident Register

PrimeCore Minerals Secure Multi Office Network

Prepared by Adam Donovan | Version 0.1 | 13 September 2026

Purpose and use

Record security incidents notified through Grafana and the administrator actions taken in response. Maintain this register manually. Create one incident reference per investigated incident and attach related firing, repeat and resolved notifications to that reference. Record actual times with their timezone. Grafana resolution does not constitute administrator acknowledgement or incident closure.

Incident index

Reference	Date	Alert and source	Classification	Response status
INC-001	13 September 2026	SEC-01 Repeated Employee WiFi Management Blocks; 192.168.11.100	Authorised validation test; alert severity medium	Automatic resolution observed; administrator acknowledgement and closure pending confirmation

INC 001 authorised validation test

Field	Recorded information
Site and procedure	brisbane-hq; SEC-01; notification handling SEC-03; evidence handling SEC-04
Source and destination	HQ-EMP-LAPTOP 192.168.11.100 to management gateway 192.168.99.1
Detection	R06 tracker 1787829015; 19 matching blocked records in five minutes; threshold above nine
Grafana firing	13 September 2026 17:14:40 AEST; email also shows 07:14:40 UTC
Firing email	Inbox displayed approximately 17:15 AEST; values A=19, C=1
Recipient route	PrimeCore IT Admin contact point; mailbox receipt evidenced
Assigned administrator	To be recorded
Acknowledged by and time	Not yet recorded
Evidence-based observations	Nine pings followed by ten additional pings received no replies. Grafana recorded the blocked traffic and sent the rule-specific alert. Test identified as authorised validation activity.
Administrator investigation	To record who reviewed the alert and logs, when, and their findings
Response and containment	To record actual administrator actions and decision rationale
Escalation	No completed escalation record supplied; record decision, recipient and time if applicable
Grafana resolution	Normal NoData at 17:19:40 AEST; resolved email displayed approximately 17:20 AEST

Field	Recorded information
Resolution interpretation	NoData mapped to OK. This does not independently verify a healthy collector or administrator closure.
Closure decision and time	Pending administrator confirmation
Evidence	R06_Nine_Plus_Ten_Ping_Test.png; R06_Scheduled_Instance_Firing.png; R06_Firing_Email_Received.png; R06_Resolved_Email_Received.png; R06_Normal_NoData_Recovery.png in the project evidence folder

New incident entry template

Copy this section for the next incident and replace each blank with actual information. Keep unknown details explicitly pending.

Field	Entry
Incident reference and date	To record
Grafana alert and related notifications	To record
Site, procedure and severity	To record
Source, destination and affected asset	To record
Firing and email receipt times with timezone	To record
Assigned administrator	To record
Acknowledgement name and time	To record
Investigation and classification	To record
Response or containment actions and times	To record
Escalation decision, recipient and time	To record
Evidence filenames and storage location	To record
Grafana resolution time and reason	To record
Administrator closure rationale, name and time	To record
Follow-up action and owner	To record

INC 002 Site A DHCP exposure

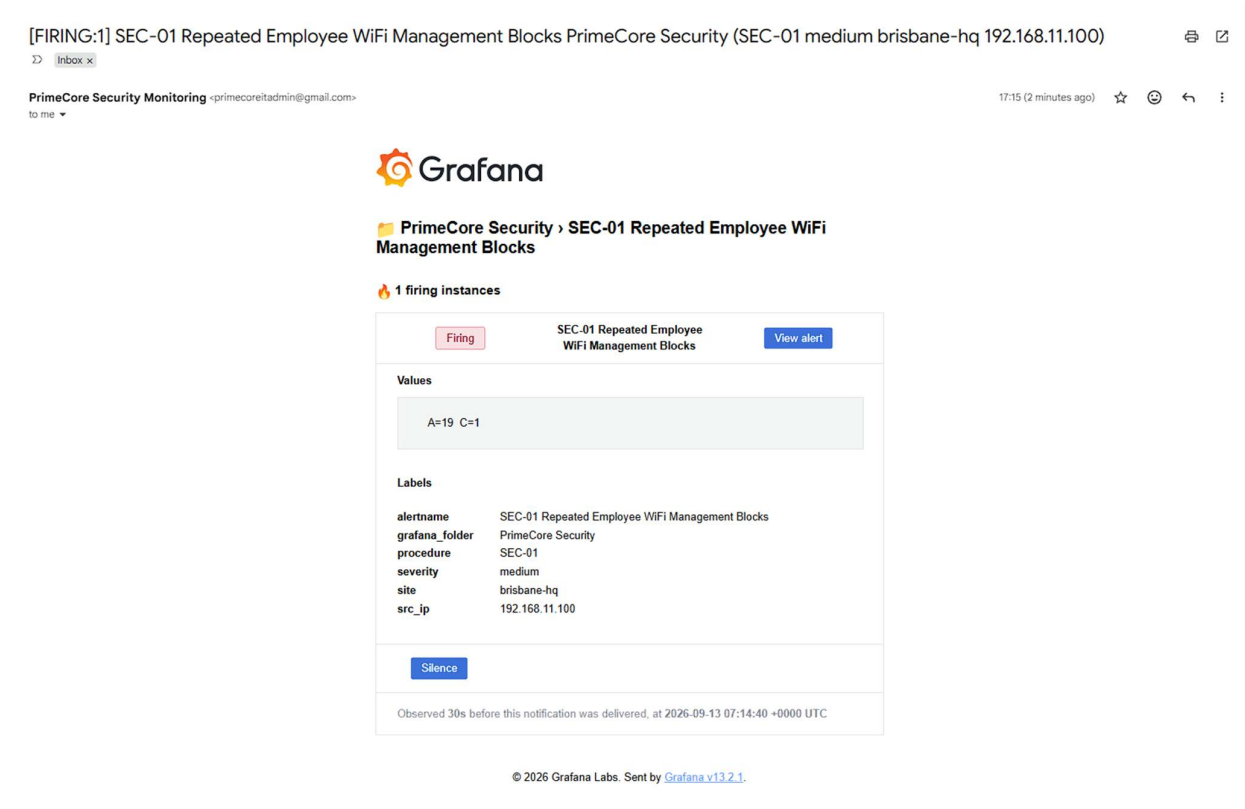

On 28 September 2026, Site A pfSense issued employee WiFi subnet leases to physical home devices. The affected PC gateway changed to 192.168.111.1. A bridge or VLAN isolation issue was suspected, but the precise cause was not established. Figures E3 and E4 show the interface context and unexpected leases.

Follow-up reporting on 29 September indicated that configuration changes appeared to mitigate the issue, and one PC check showed the intended home gateway and DHCP server. The exact remediation and checks across all devices remain undocumented. Status is provisionally mitigated; closure requires recording the changes and verifying lab isolation. Screenshot timestamps have no independently verified timezone.

Screenshot evidence appendix

These figures record selected laboratory observations. They support the tested functions described in this artefact. Proposed policies, untested controls and organisational approval remain separate from the pictured results.

Figure E1 Firing notification received

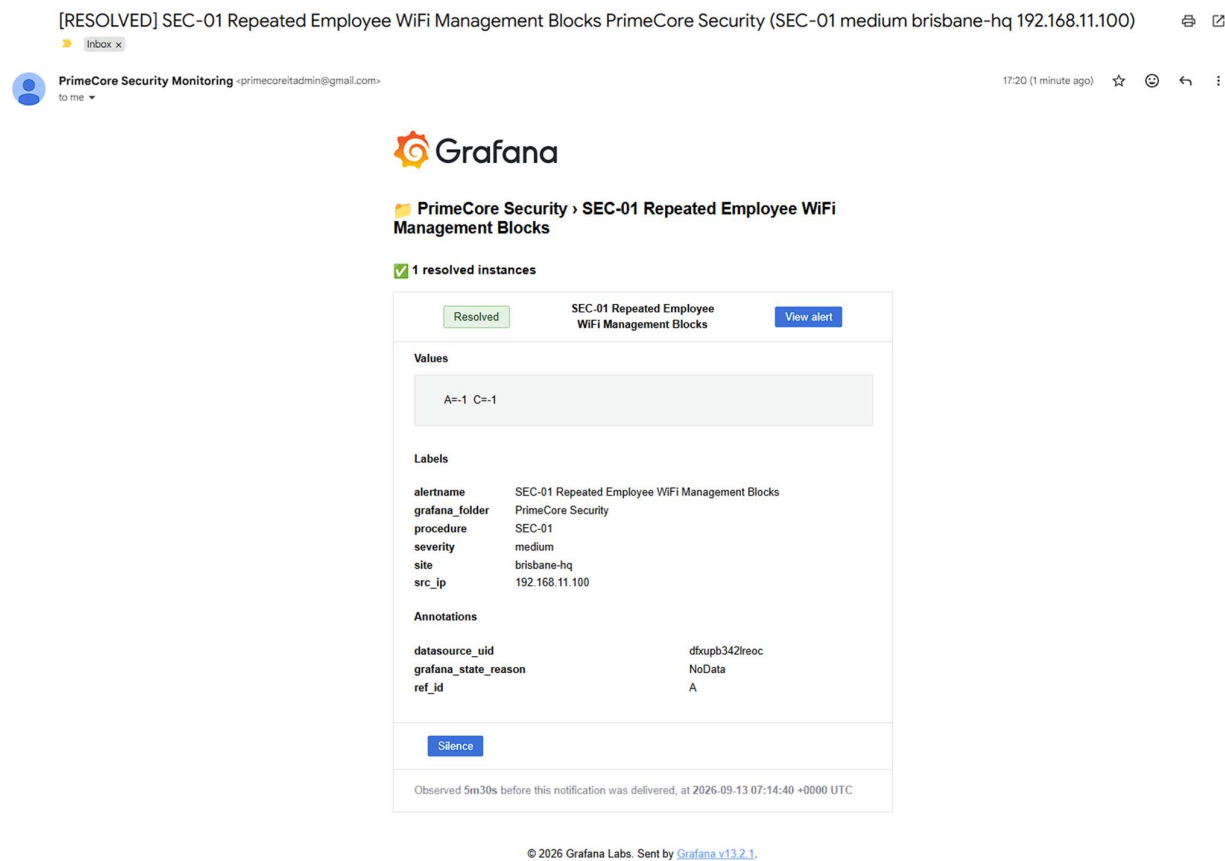

The rule-specific email reports A=19 and C=1 for source 192.168.11.100. Receipt demonstrates notification delivery, but not human acknowledgement or escalation.

Source evidence: evidence/R06_Firing_Email_Received.png

Screenshot evidence continued

Figure E2 Resolved notification received

The resolved email records NoData handling. A=-1 and C=-1 are state indicators, not negative event counts, and automated resolution does not close an incident.

Source evidence: evidence/R06_Resolved_Email_Received.png

Screenshot evidence continued

Figure E3 Site A interface context

```
WAN (wan) -> vtnet0 -> v4: 172.16.101.2/30
SITEA_MGMT (lan) -> vtnet1.99 -> v4: 192.168.199.1/24
SITEA_EMPLOYEE (opt1) -> vtnet1.10 -> v4: 192.168.110.1/24
SITEA_EMP_WIFI (opt2) -> vtnet1.11 -> v4: 192.168.111.1/24
SITEA_VISITOR (opt3) -> vtnet1.20 -> v4: 192.168.120.1/24
SITEA_PRINTER (opt4) -> vtnet1.30 -> v4: 192.168.130.1/24
SITEA_VIDEO (opt5) -> vtnet1.40 -> v4: 192.168.140.1/24
SITEA_CCTV (opt6) -> vtnet1.41 -> v4: 192.168.141.1/24
SITEA_IOT (opt7) -> vtnet1.50 -> v4: 192.168.150.1/24
SITEA_SERVER (opt8) -> vtnet1.90 -> v4: 192.168.190.1/24
SITEA_BACKUP (opt9) -> vtnet1.91 -> v4: 192.168.191.1/24

0) Logout / Disconnect SSH
1) Assign Interfaces
2) Set interface(s) IP address
3) Reset admin account and password
4) Reset to factory defaults
5) Reboot system
6) Halt system
7) Ping host
8) Shell

9) pfTop
10) Filter Logs
11) Restart GUI
12) PHP shell + Netgate pfSense Plus tools
13) Update from console
14) Enable Secure Shell (sshd)
15) Restore recent configuration
16) Restart PHP-FPM
```

SITEA_EMP_WIFI uses 192.168.111.1 and SITEA_MGMT is the renamed LAN. This identifies the incident subnet but does not establish the cause of DHCP exposure.

The lab DHCP lease list includes physical home devices. This supports INC-002 exposure evidence, but not a verified root cause or permanent remediation. Screenshot timestamps have no independently verified timezone.
